ASTHMA

Standard	Met	Not Met	Not Applicable - Why?	Comments:
1. Is there a thorough patient history each visit? (avoidance measures)				
2. Are all vitals, including oximetry and peak flow with respirations > 20, documented each visit?				
3. Is there an appropriate Lung, and CV physical exam each visit?				
4. Is there an asthma severity assessment that would allow decisions for adequate treatment plan? (self peak flow readings, medication compliance)				
5. Is the treatment plan consistent with the diagnosis?				
6. Is an action plan and patient education documented?
